

deleteSMS

Delete a previously scheduled SMS

Example

```
$result = $tmClient->deleteSMS('1234');  
echo "Message with ID {$result['scheduled_id']} was {$result['status']}";
```

Arguments:

string **\$scheduled_id**:

The ID of the scheduled text message, as returned by the sendSMS method.

Returns:

an array with 2 keys: 'scheduled_id', 'status' e.g. `$result['scheduled_id']`

Array Key	Value
scheduled_id	String: The unique ID of the scheduled message.
status	The status of the message, i.e., DELETED.

Specific error codes:

Code	Meaning
35	The provided Resource ID is not valid or is malformed.
36	This can have multiple meanings: either 1) the scheduled message id doesn't exist or belongs to other account than the one using the REST API; or 2) the scheduled message has already been sent and, as so, can't be deleted.
