

addNumbersToGroup - C#

Add a number/numbers to a 'send' group (excluding 'merge' groups).

Example

```
int numAdded = tmClient.addNumbersToGroup("My Group", "447777000001,447777000002");  
Console.WriteLine("Added {0} numbers to My Group", result);
```

Arguments:

String **groupName**:

Name ID of the group to add the numbers to.

String **numbersArray**:

The MSISDN (mobile number) you wish to add. If you want to add more than one number use a comma-delimited list.

Returns:

An integer with the total of added numbers to the selected group

Specific error codes:

Code	Meaning
0	The group ID or name was not specified or was invalid.
1	DEPRECATED.
2	No numbers were supplied for adding to the group.
3	A number was not of a valid format.
4	This service will not add to a merge group. Merge groups are not handled by this function.

error code 404 is reported if the group does not exist. See [General error codes](#).
