

# Simple Bulk SMS API

---

The API uses **HTTP GET** requests to communicate with the Text Marketer gateway server. The requests allow you to send SMS's through the system to the end user.

This guide provides a one-stop reference for the Simple API. It assumes the reader has a basic understanding of **HTTP GET** and some basic level in a development language such as PHP, .Net etc.

You may wish to use are more comprehensive and feature rich REST API, you need to know the difference between **POST** and **GET** request s, and be familiar with the principles of XML.

You can get code examples for interacting with the API using your preferred programming language [here](#).

First you need to create a [free account](#) with us.

This will allow you to configure some aspects of the account. Once you have logged in the menu option you will need is “**Account Settings**” => “**Api Config tab**” this will give you the **username** and **password** you need plus an example url.
