

addNumbersToGroupWithName

Add a number/numbers to a 'send' group (excluding 'merge' groups).

Example

```
$add=$tmClient->addNumbersToGroupWithName(array('447000000001','447000000002'), 'My Group');  
if (!empty($add['added']))  
{  
    echo count($add['added'])." numbers were successfully added:<br/>\n";  
    foreach ($add['added'] as $number)  
        echo "$number <br/>\n";  
}
```

Arguments:

array **\$numbersArray**:

An array of the MSISDNs (mobile number(s)) you wish to add.

string/int **\$groupName**:

Name (or integer ID) of the group to add the numbers to.

Returns:

an array with 3 keys: 'added', 'stopped', 'duplicates', each corresponding value being an array of numbers

Array key	Value
added	Array. An array of numbers in international format (e.g.447000000000 for a UK mobile). These numbers were successfully added to the group.
stopped	Array. An array of numbers in international format. These numbers were not added to the group because they are in a 'stop' group.
duplicates	Array. An array of numbers in international format. These numbers were not added to the group because they are already in the group.

Specific error codes:

Code	Meaning
0	The group ID or name was not specified or was invalid.
2	No numbers were supplied for adding to the group.
3	A number was not of a valid format.
4	This service will not add to a merge group. Merge groups are not handled by this function.

error code 404 is reported if the group does not exist. See [General error codes](#)
