

getDeliveryReports

Retrieve a list of available delivery report names.

Example

```
$result = $tmClient->getDeliveryReports();
echo "User Directory: {$result['userdirectory']} <br/>\n";
foreach($result['reports'] as $key => $report)
    echo "Report number $key: Name {$report['name']}, Last Updated
    {$report['last_updated']}, Extension {$report['extension']} <br/>\n";
```

Arguments:

None.

Returns:

an array with 2 keys: 'userdirectory' and 'reports':

Array key	Value
userdirectory	DEPRECATED – this value no longer has any meaning.
reports	Array of arrays. reports is an array of arrays where each nested array has keys 'name', 'last_updated', 'extension'.

Each nested array in the array 'reports' has 3 keys:

Array key	Value
name	String. The name of the report.
last_updated	String. The last time a message delivery status in this delivery report was updated, in ISO 8601 format. This allows you to determine whether there was a change since you last accessed the report
extension	DEPRECATED – this value no longer has any meaning.

Specific error codes:

None.
