

# addGroup - Java

---

Create a new 'send' group.

## Example

```
if(tmClient.addGroup("My Group"))  
    System.out.println("'My Group' added with success.");
```

### Arguments:

String **group**:

the name of the group to be created. Up to 25 alpha-numeric characters, and '-' are allowed. The name cannot consist of only digits.

### Returns:

an true boolean if the group is added with success

### Specific error codes:

Code	Meaning
0	DEPRECATED.
1	A group with that name already exists (group names are not case-sensitive).
2	The group name is invalid. Only up to 25 alpha-numeric characters, and '-' are allowed. The name cannot consist of only digits, at least one alpha character or '-' must be present.

error code 404 is reported if the group does not exist; error code 400 is reported if the group name was not specified. See [General error codes](#).
