

transferCreditsToUser - Java

Transfer credits from one account to another account, using the username to specify the target account.

Example

```
Hashtable<String, String> result = tmClient.transferCreditsToUser(3,
"targetusername", "targetuserpass");
System.out.println("Transferred 3 Credits (have " +
result.get("source_credits_after") + " now), to account targetusername, now with " +
result.get("target_credits_after") + "Credits");
```

Arguments:

int **quantity**: The number of credits to transfer from the source account to the target account.

String **target_username**: The username of the account to transfer the credits to.

String **target_password**: The password of the account to transfer the credits to.

Returns:

an Hashtable with four keys:
'source_credits_before',
'source_credits_after',
'target_credits_before' and
'target_credits_after' e.g.
result.get("target_credits_after")

Hashtable key	Value
source_credits_before	The number of credits on the source account before the transfer.
source_credits_after	The number of credits on the source account after the transfer.
target_credits_before	The number of credits on the target account before the transfer.
target_credits_after	The number of credits on the target account after the transfer.

Specific error codes:

Code	Meaning
0	There are insufficient credits available to transfer the specified quantity, or the specified quantity is not a positive number
1	The target account number specified is not a valid number or username/password combination does not refer to any known account
