# deleteSMS - C#

Delete a previously scheduled SMS

### Example

```
Hashtable result = tmClient.deleteSMS("1234");
Console.WriteLine("Message with ID {0} was {1}", result["scheduled_id"],
result["status"]);
```

**Arguments:**

string **scheduled_id:**    The ID of the scheduled text message, as returned by the sendSMS method.

**Returns:**

A Hashtable with 2 keys: 'scheduled_id', 'status' e.g. result["scheduled_id"]

| Hashtable key | Value |
|---|---|
| scheduled_id | String: The unique ID of the scheduled message. |
| status | The status of the message, i.e., DELETED. |

**Specific error codes:**

| Code | Meaning |
|---|---|
| 35 | The provided Resource ID is not valid or is malformed. |
| 36 | This can have multiple meanings: either 1) the scheduled message id doesn't exist or belongs to other account than the one using the REST API; or 2) the scheduled message has already been sent and, as so, can't be deleted. |
