

# getDeliveryReports - C#

---

Retrieve a list of available delivery report names.

## Example

```
String[] result = rClient.getDeliveryReports();  
foreach (String report in result)  
    Console.WriteLine("Report name: {0}", report);
```

**Arguments:**

None.

**Returns:**

An array of String with the delivery report names.

**Specific error codes:**

None.

error code 404 is reported if the group does not exist; error code 400 is reported if the group name was not specified. See [General error codes](#)
