

# getKeyword - C#

---

Get the availability of a given reply keyword.

A reply keyword allows you receive incoming text messages to your account by providing people with a keyword, which they text to the short code 88802, e.g. text 'INFO' to 88802 to see this in action.

## Example

```
Hashtable result = rClient.getKeyword("gold");
Console.WriteLine("The 'gold' keyword is available ({0}), recycled ({1})",
    result["available"], result["recycle"]);
```

## Arguments:

String **keyword**:

The keyword to check is availability.

## Returns:

A Hashtable with two keys: 'available' and 'recycle' e.g. result["available"]

Hashtable key	Value
available	Whether this keyword is currently available from Text Marketer.
recycle	Whether this keyword has been recycled (previously used)

## Specific error codes:

None.

error code 400 is reported if the keyword name is not specified. See [General error codes](#)
