

# transferCreditsToAccount - C#

Transfer credits from one account to another account, using the integer account number to specify the target account.

## Example

```
Hashtable result = tmClient.transferCreditsToAccount(3, "1234");
Console.WriteLine("Transferred 3 Credits (have {0} now), to account 902, now with {1} Credits", result["source_credits_after"], result["target_credits_after"]);
```

## Arguments:

int **quantity**:

The number of credits to transfer from the source account to the target account.

String **targetAccountNumber**:

The account number of the account to transfer the credits to (available in the web-based UI)

## Returns:

A Hashtable with four keys: 'source\_credits\_before', 'source\_credits\_after', 'target\_credits\_before' and 'target\_credits\_after' e.g. result["source\_credits\_after"]

Hashtable key	Value
source_credits_before	The number of credits on the source account before the transfer.
source_credits_after	The number of credits on the source account after the transfer.
target_credits_before	The number of credits on the target account before the transfer.
target_credits_after	The number of credits on the target account after the transfer.

## Specific error codes:

Code	Meaning
0	There are insufficient credits available to transfer the specified quantity, or the specified quantity is not a positive number
1	The target account number specified is not a valid number or username/password combination does not refer to any known account
